JOB DESCRIPTION – INTERNS – GEN AI SDE

Job Overview:
We are building next-generation AI-powered products and platforms leveraging cutting-edge Generative AI frameworks and LLM-driven architectures. If you are passionate about AI, love experimenting with models, and enjoy solving complex problems with code — we would love to meet you.

Key Responsibilities:

- Develop and integrate AI-based solutions using LLMs, prompt engineering, fine-tuning and model optimization.
- Work on end-to-end AI workflows — data preprocessing, training, evaluation, deployment, monitoring & scaling.
- Build scalable microservices, APIs and automation pipelines around AI/ML systems.
- Research and experiment with latest GenAI models, frameworks, vector DBs & inference systems.
- Create clean, well-documented code with clear architecture, flowcharts, datasets & experiment tracking.
- Optimize model latency, cost & performance using quantization, batching, caching, etc.
- Implement evaluation frameworks, benchmarking & continuous improvement for AI systems.
- Participate in collaborative discussions, brainstorming & contribute to product vision and roadmap.
- Stay up-to-date with emerging AI technologies; explore new tools, frameworks & research papers.
- Protect confidential data & ensure responsible use, ethical AI and security compliance.
- Contribute to organization goals by completing assigned deliverables on time with quality.

Required Skills & Qualifications:

- Bachelor's/Master's degree in CSE, IT, AI, Data Science or equivalent.
- Good understanding of Machine Learning fundamentals, Python programming & data structures.
- Knowledge of LLMs, NLP techniques, embeddings, vector search systems.
- Familiarity with AI frameworks like **PyTorch, TensorFlow, Keras, Transformers (Hugging Face)**.
- Ability to work with APIs, datasets, pipelines & cloud compute for model training or inference.

Experience (project/internship) with one or more GenAI tasks:

- Prompt engineering
- Model fine-tuning / RAG
- Text, speech, or image generation
- Good understanding of databases – SQL/NoSQL; familiarity with **Vector DBs** is a plus.
- Hands-on learning mindset — POC building, AI tool experimentation, hackathon participation.
- Ability to document requirements, model architectures, experiments, and results clearly.

Good to Have (Not mandatory but preferred):

- Knowledge of LangChain, LlamaIndex, RAG architecture.
- Experience deploying AI apps on GCP/AWS/Azure or using serverless compute.
- Understanding of CI/CD, Docker, Kubernetes, scalable API design.
- Contributions to open-source AI projects or participation in AI research.
